

PROJECT EXPERIENCE

COLES

Coles Distribution Centre, Eastern Creek, NSW
Sector: Commercial / Civil / Retail
Contract Period: Long Term Maintenance

Remtech are involved in the on-going maintenance of one of Australia's leading retail supermarket chains; Coles.

The Coles Distribution Centre located in Sydney's Western suburbs is a 37,000m² warehouse facility responsible for the distribution of stock to a number of the Coles Supermarkets throughout New South Wales.

The expansion joints throughout the warehouse are subject to high impact loads as a result of forklift traffic. This continual impact over time, results in the metallic plates of the expansion joints becoming dislodged, loose and in some instances, completely bent, causing WHS concerns to forklift drivers in the warehouse.

SCOPE OF WORKS

On a monthly basis, Remtech undertakes the following scope of works:

- Inspection of the warehouse floor plates
- Submission of report and findings

- Removal of defective expansion joint plates requiring replacement
- Manufacture, supply and installation of new metal expansion joints
- Site clean
- Site demobilisation

The continual inspection, reporting and repair of the expansion joint plates ensures the safety of warehouse staff and the continual unimpeded operation of the Coles Distribution Centre throughout the critical retail times of the year.

It also maintains the asset to a standard that assists the productivity of the warehouses' daily and annual operations.

Following completion, Remtech ensured the client was delivered a highly proficient project of superior quality, harnessing all necessary guarantees and compliance documentation.
